Topic **AttentionX · a service US RL Eval & data companies pay for**

Weather Decision Gym

Field-level weather and loss forecasts for US farm insurers.

Farm data in

Corn farm · Iowa, 290 acres
Satellite, forecasts, field sensors, harvests
→ 2026 yield: 86.5% of normal

Poultry farm · Iowa broilers
Heat-index forecast, barn temps, flock records
→ heat-wave flock loss % (next)

Our engine

1. Field-level weather
Forecasts downscaled to each field or barn

2. Loss model
Weather → yield % or flock loss %

3. Retrain on real outcomes
Every harvest and flock record retrains it

error 3.4 → 2.5 %p (baseline 6.2)

Who pays

Crop & livestock insurers
Premium, payout and renewal ranges; claim checks

US RL eval & data companies
Auto-graded weather tasks, scored by next-day observations

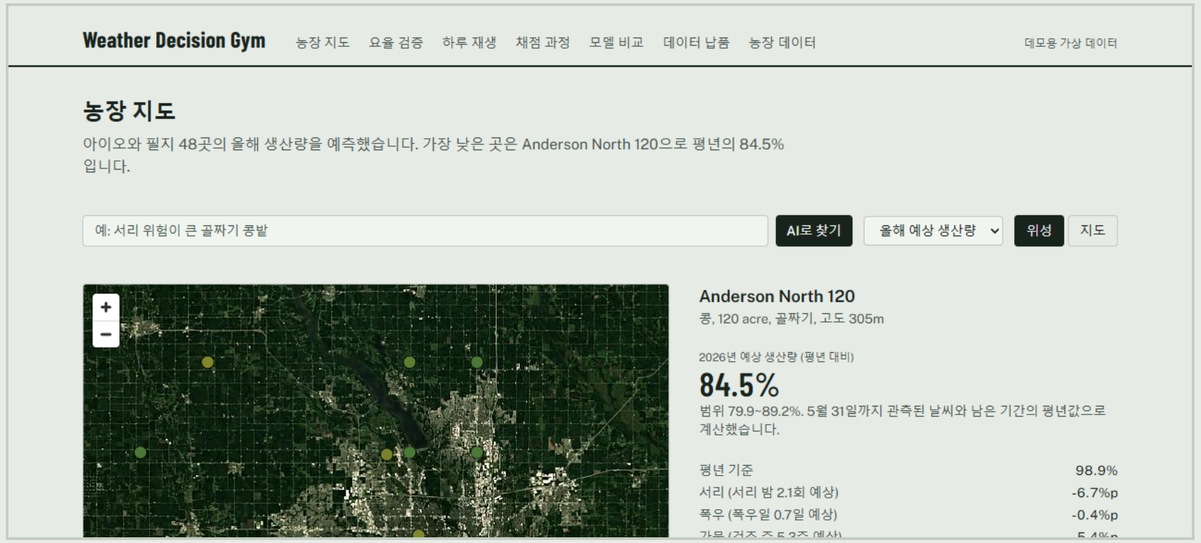

Target · US crop & poultry insurers in the Corn Belt; US RL eval and data companies.

Problem · **73%** of US crop insurance payouts are weather-driven ($118.7B, 2001–2022).

Built today · weather-decision-gym.vercel.app

Farm map: pick a field, get its 2026 yield as % of normal.

Insurer console: risk score vs. real losses → rate ranges.

How it works

Field weather → yield % per farm → retrained on each real harvest: error falls **3.4 → 2.5 %p** as seasons are added (no-model baseline 6.2). **Claude** finds farms, writes briefings, and is the agent graded in our RL tasks.

Why us · next 7 days

One engine, two buyers: insurer rate ranges and auto-graded RL tasks. Next 7 days: live Open-Meteo, IEM and NOAA feeds, one insurer pilot.

Demo uses mock Iowa farms.
